

Glass milk container

*Jura*

# Benefits

# The quick and easy way to enjoy the perfect cup of coffee

The milk pipe is connected to the cover and preparation can be started. The simple plug connections ensure that the route the milk follows is totally clean.\*

\* The outer area of the milk pipe, which is often dirty, never comes into direct contact with the milk.

## High-quality, perfectly hygienic materials

The high-quality glass container and the stainless steel milk lance are ideal for storing milk as they are taste-neutral.

## Easy to store

The glass milk container is very manageable and can be easily stored in the refrigerator door.

## Easy to clean

Since they have a smooth surface and are suitable for dishwashers, glass and stainless steel are nice and easy to clean.

## Summary

The glass milk container has an attractive simplicity and is the perfectly hygienic alternative to a milk carton.

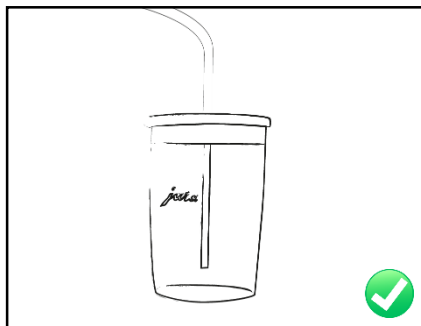

- The quick and easy way to enjoy the perfect cup of coffee
- High-quality, perfectly hygienic materials
- Easy to store
- Easy to clean

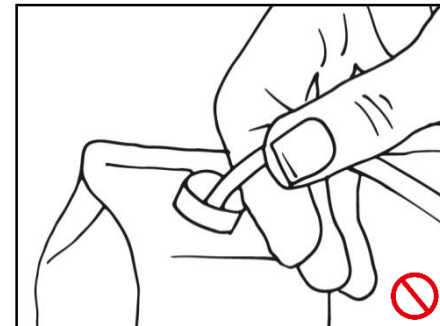

# Comparison of glass milk container with milk carton

- When passing from the container to the cup, milk only makes contact with closed areas
- The outside of the milk pipe does not come into contact with the milk
- The outside of the milk pipe does not have to be cleaned

- The route taken by the milk between the container and cup is not closed
- Milk comes into contact with the dirty outside of the milk pipe and is thereby contaminated
- The outside of the milk pipe has to be cleaned

# Supplied as standard
